The survey was executed in accordance with the specifications set forth in the Manual of Surveying Instructions, 1973, and the Special Instructions for Group No. 986, dated June 24, 2004.

The direction of the lines were determined by mean geodetic inverse between corners. Global Positioning System (GPS) utilizing Real-time kinematic (RTK) was used throughout the survey. Cadastral Measurement Management (CMM) was utilized during the course of the survey.

Preliminary to the resurvey, the lines of the original survey were retraced and a diligent search was made for any evidence of the original field note record. The retracement data were thoroughly verified and only the true line notes are given herein.

The geographic position of the standard corner of sections 3, 4, 33 and 34, Ts. 20 and 21 S., R. 1 W., as determined by utilizing National Geodetic Survey OPUS solution, utilizing base stations SALT LAKE CITY CORS, MIDVALE CORS ARP and CARBON COUNTY COU CORS ARP, is as follows:

Latitude: 39°01'03.940" N. Longitude: 111°54'31.531" W.
N.A.D. 83 (1994), N.A.V.D. 1988, Elevation 5444 ft.
